Medical Device Manufacturing

At JAAS Systems our goal is to provide you with a total system to run your business profitably. We understand the strict demands placed upon you, as a medical device manufacturer, by your customers and by federal regulations. JAAS Advanced Manufacturing Software for Acumatica was created by experts with hundreds of years of combined experience in the manufacturing industry. This knowledge, combined with new cloud technology from Acumatica, delivers a feature-rich, fully integrated manufacturing, distribution, customer management, project management, and accounting solution.

Our solution provides medical device manufacturers an end-to-end manufacturing ERP solution:

- ✓ Project Management for your Research and Development
- ✓ Document Management, Quality Management, Workflow Management, and detailed audit trails necessary for CFR and FDA requirements
- ✓ Customer Management for your sales and marketing efforts as well as service and support
- ✓ Depth and control from the beginning; from Bill of Material revision control through our robust shop floor capabilities including cradle to grave serial lot traceability

For medical device manufacturers, your world is becoming increasingly smaller. Globalization is felt in both customers and competition. Mergers and acquisitions are becoming a fact of life and if you are a subsidiary or division of a larger organization, you may feel pressure to use whatever ERP system is being used at your parent company. However, one size does not always fit all. Overhead demands of a product designed for your parent may not be right for your organization. You need a solution that fits your circumstances and can still integrate your data back into the systems used at your parent company, or with other divisions within your organization; thus making JAAS a compelling solution.
