Identifying bottlenecks and shop floor load is a key component to achieving operational efficiency. The JAMS CRP module provides information to balance the work that needs to be done with available resources.

### Benefits:

- **Production orders can be rescheduled quickly by dragging and dropping**
- **Gives the scheduler a real-time view of what resources are needed and available**
- **Graphical representation helps users measure, react, and balance changes in the supply and demand for work centers and machine capacities**
- **By setting and adjusting capacity thresholds, work centers can be monitored for performance**

“When Manufacturing is Your Business™”
Capacity Requirements Planning Module

- Drag and Drop Scheduling
- Exception-Based Reporting
- Track Capacity to Pegged Orders
- Extensive Drill Down Capabilities
- Split Orders to Smooth Schedules
- Displays Exception Messages from MRP
- Operation by Operation View of Production
- Highlights the Need for Schedule Changes, Overtime, and Crew Size

View entire capacity utilization of the shop floor.

Graphically highlights demand of the work center.

About JAMS
JAMS is a series of manufacturing modules that directly integrates with Microsoft Dynamics® SL. Designed and built around Microsoft SQL Server, the system accommodates powerful reporting and customer inquiry capabilities. JAMS provides your company with detailed visibility into the manufacturing functions of your business. For more information about JAMS please visit www.jaas.net.
