

Product Configurator

Sales orders reaching the shop floor when engineering rules were not followed can result in production delays, wasted inventories, and customer service issues. The JAMS Product Configurator module can help your organization address these problems.

The Configurator screen automatically reflects the relationships between selected options.

Benefits:

Dragging and dropping allows configurations of product features and options to be created quickly and efficiently

Products can be configured multiple ways greatly reducing the number of Bill of Materials for each item

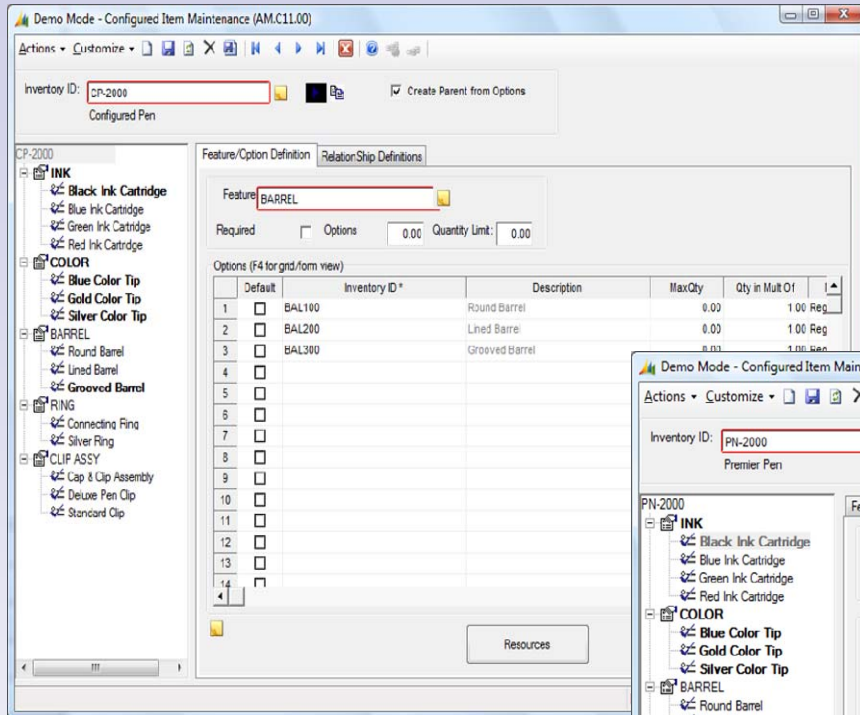

Real time price and cost rollup while the item is being configured

Configurations can be created on quotes, sales orders, and/or production orders

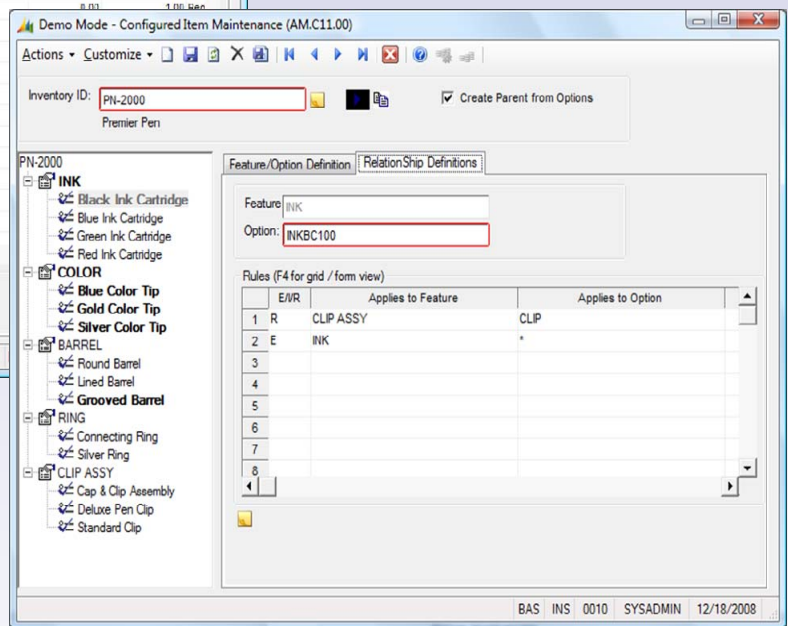

“When Manufacturing is Your Business™”

Product Configurator Module

- Cost/Price Rollup
- Rules-Based System
- Configuration Evaluation
- Supports Phantoms as Options
- Non Hierarchical Feature Selection
- Supports Non-Inventory Items as Options
- Define Resources among Features
- Launch within Microsoft Dynamics® SL Order Management and JAMS Production Order

Visually establish features and options.

Define the rules of the configuration.

About JAMS

JAMS is a series of manufacturing modules that directly integrates with Microsoft Dynamics® SL. Designed and built around Microsoft SQL Server, the system accommodates powerful reporting and customer inquiry capabilities. JAMS provides your company with detailed visibility into the manufacturing functions of your business. For more information about JAMS please visit www.jaas.net.
